June 2024: chiropractic adjustment, imaging, massage therapy, pain management	6	$2,068.39
July 2024: imaging	1	$984.89

Treatment summary

Patient presented following a low-speed collision in a parking lot, reporting neck and low back strain. The mechanism of injury is consistent with the reported symptoms, and the initial presentation was reasonable for a soft tissue strain of this kind. There is no known prior injury to the cervical or lumbar regions. Over the course of care, the patient completed 44 visits, with additional services added progressively over several months. The duration and scope of treatment have extended well beyond what is typically required for a strain of this severity. Imaging of the cervical and lumbar spine was within normal limits. Observed movement outside the examination room was unrestricted and did not match the range of motion described during formal testing. Billing records reviewed for this episode show no duplicate or repeated charges for the same service.
