April 2025: chiropractic adjustment, massage therapy, physical therapy	4	$463.20
May 2025: imaging, massage therapy	2	$1,263.33

Treatment summary

Patient presented following a rear-end motor vehicle collision with reported head impact and subsequent concussion symptoms including headache, dizziness, light sensitivity, and difficulty concentrating. The mechanism of injury and the force involved are consistent with the reported presentation. Neurological examination and imaging findings clearly confirm the diagnosis of concussion. No prior injury to the head or neck region is known from the patient's history or available records. Care was delivered over 24 visits, consisting of graded symptom management, vestibular and oculomotor exercises, cognitive rest guidance, and progressive return-to-activity planning. Recovery has been slower than typically anticipated for this injury, with symptmos persisting longer than average despite consistent participation in treatment. Billing records reflect single, appropriately itemized charges for each service, with no duplicated entries. Continued follow-up and symptom monitoring are planned.
