July 2024: imaging, pain management, physical therapy	4	$1,726.63
August 2024: chiropractic adjustment, massage therapy, pain management	4	$854.65

Treatment summary

Patient presented following a rear-end motor vehicle collision with pain and swelling of the left wrist. Imaging and examination findings clearly confirm a distal radius fracture consistent with the reported mechanism. Causation of this injury relative to the collision is not yet clear and should be considered in light of the full history. The patient reports a remote minor strain to the same region, which resolved completely without residual limitation. Treatment followed a usual course, including immobilization, orthopedic follow-up, progressive range-of-motion and strengthening therapy, and home exercise instruction. Over the cousre of 30 visits, the patient's symptoms steadily improved and care tapered as function returned. Billing records reflect single, non-duplicated charges for services rendered. At discharge from active care, the patient was advised to continue a home program and to return if symptoms recur.
