Month and services	Visits	Charges
December 2023: evaluation, pain management, physical therapy	4	$1,656.28
January 2024: chiropractic adjustment, pain management, physical therapy	3	$983.47

Treatment summary

Treatment Summary

The patient presented following a side-impact collision at an intersection with complaints consistent with cervical whiplash injury. Over the course of seven visits, care followed a conventional and expected progression, beginning with pain control, gentle range-of-motion exercises, and soft tissue management, then tapering in frequency as symptoms improved. Physical examination revealed some objective findings, including reduced cervical range of motion and paraspinal muscle tenderness, which support the reported injury. Other neurological and orthopedic tests were within normal limits. The patient reports no prior injury to the cervical spine or surrounding area, and no earlier complaints of this nature are documented in the record. The injury mechanism described is a plausible explanation for the symptoms observed. Billing records reflect one charge per scheduled service with no duplicate or repeated entries. At the most recent visit, the patient was improving and was advised to continue a home exercise program with follow-up as needed.
