December 2023: imaging, massage therapy, pain management	3	$1,476.93
January 2024: chiropractic adjustment, pain management, physical therapy	3	$707.76

Treatment summary

The patient presented following a rear-end motor veihcle collision with neck pain, stiffness, and headache consistent with cervical whiplash injury. The mechanism of injury described is entirely plausible for the force involved in this type of crash. Over the course of 27 visits, care included examination, targeted physical therapy, and home exercise instruction. Imaging and physical examination findings clearly confirm soft tissue injury to the cervical spine, with reduced ragne of motion and paraspinal tenderness documented at initial evaluation. Treatment followed a usual and expected course, with visit frequency tapering as symptoms steadily improved and range of motion returned toward baseline. No prior injury or treatment to the same body region is known to this provider. Billed services correspond to the care documented in the clinical notes, with no repeated or duplicate charges identified. Prognosis is good with continued home exercise.
