October 2023: imaging, pain management, physical therapy	4	$2,191.81
November 2023: massage therapy	1	$82.78

Treatment summary

Patient presented following a rear-end motor vheicle collision with complaints of neck pain, stiffness, and headache consistent with cervical whiplash injury. The mechanism of injury described is a plausible cause of the reported symptoms. Over the course of care, the patient attended 21 visits, which is somewhat longer than typically expected for this type of injury. Physical examination revealed limited cervical range of motion and paraspinal muscle tenderness, supporting the diagnosis, while neurological screening and imaging were within normal limits. Review of prior records notes a minor cervical strain several years ago that resolved completely without lasting limitation. Billing records were reviewed and do not show duplicate or repeated charges for the same services. Treatment included chiropractic adjustments, soft tissue therapy, and a home exercise program. At the time of the most recent visit, the patient reported partial improvement, with ongoing intermittent stiffness and reduced tolerance for prolonged neck positioning. Further follow-up is recommended to monitor progress and reassess functional status.
