Treatment History and Summary

Patient:	Danielle Stevenson
Treating provider:	Kelsey Daniels, DC
Diagnosis:	concussion

Treatment history by month

Month and services	Visits	Charges
September 2023: evaluation	1	$310.37
October 2023: imaging, pain management, physical therapy	5	$2,351.94

Treatment summary

Patient presented following a low-speed collision in a parking lot with reported head impact and subsequent headache, dizziness, and difficulty concentrating. Over six visits, care consisted of symptom monitoring, cognitive and vestibular assessment, graded activity guidance, and education on concussion precautions. The reported mechanism of injury is consistent with the symptoms described and with the force of the collision as documented. Neurological examination showed some findings supportive of concussion, including mild balance deficits and reduced performance on attention tasks, while other testing, including cranial nerve examination, coordination, and strength, was within normal limits. No prior injury to the head or neck has been identified in the available history. Treatment followed a typical course, with frequency of vistis decreasing as symptoms improved and the patient returned toward baseline function. Billing records reflect one charge per scheduled service with no duplicate entries. Prognosis is good with continued gradual return to nromal activities.
