November 2023: chiropractic adjustment, imaging, physical therapy	5	$2,176.24
December 2023: chiropractic adjustment	2	$202.48

Treatment summary

Patient presented following a rear-end motor vehicle collision with complaints of neck and low back pain. The reported mechanism and force of impact are consistent with the soft tissue ijnuries observed. Imaging and physical examination findings confirm cervical and lumbar strain. No prior injury to these regions is known. The patient has attended 34 visits to date. Treatment frequency and the range of services have grown over several months, with new modalities added at successive stages, well beyond what is typically required for this type of strain. Billing records reviewed for this summary show no repeated charges for the same services. Ongoing management includes active therapy and home exercise instruction, with reassessment planned to determine whether further visits remain medically necessary.
