March 2024: chiropractic adjustment, imaging, physical therapy	4	$1,663.51
April 2024: chiropractic adjustment, massage therapy	5	$555.19

Treatment summary

Patient presented following a rear-end motor vehicle collision with ongoing right knee pain, swelling, and reduced range of motion. Over the course of 28 visits, care consisted of physical examination, imaging review, a structured physical therapy program, and home exercise instruction. The reported knee complaints are consistent with the mechanism and force of the collision as described in the history. Early visits were frequent, and the treatment intensity tapered steadily as symptoms improved and function returned. Some examination findings, including joint line tenderness and a positive effusion sign, support the presence of a knee injury. Other tests, including ligament stability assessments and neurovascular checks, were within normal limits. No prior injury or treatment involving this body area is known from the patient's history or records. Billed services reflect the care delivered, with no duplicated or repeated charges identified. The patient is currently improving and is expected to continue a home program with periodic follow-up as needed.
