January 2025: chiropractic adjustment, imaging, massage therapy, pain management	5	$2,533.48
February 2025: chiropractic adjustment, massage therapy	4	$436.67

Treatment summary

Patient presented following a low-speed collision in a parking lot with ongoing right shoulder pain and reduced range of motion. Over the course of 18 visits, care consisted of physical therapy, home exercise instruction, and as-needed anti-inflammatory medication. Treatment followed an expected progression, with visit frequency tapering as symptoms improved and function returned toward baseline. Examination findings were mixed: several provocative maneuvers and range-of-motion measurements support a shoulder soft tissue injury, while strength testing and neurological screening were within normal limits. The patient reports no prior injury or treatment involving this shoulder. Billed services reflect the planned course of care with no duplicate or repeated charges. At this time it remains unclear to what extent the present complaints are attributable to the collision versus other causes, and further imaging correlation may be helpful for that determination. Continued home exercise and reassessment are recommended, with return precautions reviewed.
