April 2024: chiropractic adjustment, imaging, pain management	5	$1,731.34
May 2024: imaging, physical therapy	2	$1,013.57

Treatment summary

Patient presented following a rear-end motor vehicle collision with complaints of right knee pain, swelling, and limited range of motion. The reported mechanism of injury is consistent with the forces involved in a crash of this type, and the presenting symptoms fit that history. Imaging and physical examination findings clearly confirm the knee injury. No prior injury or treatment involving the same body area is known to this provider. Over the course of 25 visits, the patient received physical therapy, anti-inflammatory medication management, and progressive strengthening exercises. The treatment course followed a typical progression, with visit frequency tapering as swelling resolved, strength returned, and function improved. At the time of discharge, the patient had regained most of the motion and stability in the knee and was returning to daily activities. Note that two similar billing entries recorded on the same date of service are currently under administrative review.
