Patient:	Kenneth Brown
Treating provider:	Michael Clark, DC
Diagnosis:	wrist fracture

Treatment history by month

Month and services	Visits	Charges
August 2023: chiropractic adjustment, evaluation, imaging	4	$1,103.90

Treatment summary

Patient presented following a side-impact collision at an intersection with acute pain and swelling of the left wrist. Imaging confirmed a distal radius fracture, and the examination findings were consistent with that imaging. The mechanism of injury described is entirely plausible for a crash of this type. The patient has no known prior injury to this wrist or the surrounding area. Initial management consisted of immobilization in a splint followed by a structured course of care. Over four visits, treatment followed a typical progression, with pain, swelling, and range of motion improving steadily at each follow-up. Care was tapered as the patient recovered, and no further intervention is currently planned beyond routine monitoring. Billing records reflect single charges for each service provided, with no repeated or duplicate entries. Prognosis for full functional recovery is good, with a return to normal daily activities anticipated once healing is complete.
