Treatment History and Summary

Patient:	William Lyons
Treating provider:	Vincent Tran, DC
Diagnosis:	whiplash

Treatment history by month

Month and services	Visits	Charges
May 2023: chiropractic adjustment, evaluation, imaging	3	$1,199.59
June 2023: massage therapy, pain management, physical therapy	4	$1,134.52
July 2023: chiropractic adjustment, massage therapy, physical therapy	4	$526.47
August 2023: imaging, pain management	2	$944.74

Treatment summary

The patient presented following a low-speed head-on collision with complaints of neck pain, stiffness, and headaches consistent with whiplash-type injury. The mechanism of injury is plausible for a collision of this nature. Over the course of 13 visits, the patient received conservative management including manual therapy, a home exercise program, and posture education. Imaging and examination findings clearly confirm soft tissue injury to the cervical spine, with reduced range of motion and paraspinal msucle tenderness documented at initial evaluation. No prior injury to the cervical region is known to this provider. Treatment followed a usual and expected course, with visit frequency tapering as symptoms steadily improved and range of motion returned toward baseline. Billing records reflect single charges for each service rendered, with no repeated or duplicate entries. At the time of discharge from active care, the patient was improving and was instructed to continue the home exercise program as needed.
