March 2025: imaging, massage therapy, pain management, physical therapy	5	$2,497.69
April 2025: imaging, massage therapy	4	$1,715.83

Treatment summary

Patient presented following a low-speed collision in a parking lot with reported headache, dizziness, light sensitivity, and difficulty concentrating. Neurological examination and imaging findings clearly confirm the concussion diagnosis. Causation relative to this specific crash has not yet been fully established, and further records will be reviewed to clarify the relationship between the event and the current presentation. No prior injury to the head or neck region is known to this provider. Care consisted of 30 visits including symptom monitoring, vestibular and vision-focused therapy, graduated cognitive rest recommendations, and periodic reassessment. The treatment course followed a typical trajectory, with visit frequency tapering as symptoms improved and functional capacity returned. Billing records reflect single entries for each service without repeated charges for the same care. Patient is currently progressing and will continue follow-up as clinically indicated.
