July 2024: chiropractic adjustment, massage therapy	5	$535.49
August 2024: pain management	1	$694.43

Treatment summary

Patient presented following a rear-end motor vehicle collision with complaints of neck and low back pain and stiffness. The reported injuries are consistent with the mechanism and force of the impact. Care was delivered over 23 visits, consisting of manual therapy, supervised exercise, and home program instruction, and followed an expected course with symptoms gradually easing and visit frequency tapering as function improved. Most of the clinical picture rests on the patient's subjective pain reports, as cervical and lumbar range-of-motion and neurological screening were unremarkable and imaging studies showed no acute abnormality. The patient mentioned a minor strain to the same region several years ago, which the patient reports resolved completely without lasting limitation. Billing records reflect single charges for each service with no duplicated or repeated entries. Prognosis is fair with conitnued home exercise, and the patient was advised to return if symptoms recur or worsen.
