May 2025: pain management, physical therapy	4	$1,807.18
June 2025: imaging, massage therapy, pain management	4	$1,826.03

Treatment summary

Patient presented following a low-speed collision in a parking lot with complaints of neck and back strain. The mechanism of injury is consistent with the reported impact, and the symptoms described fit that force well. Over the course of 25 visits, care proceeded along a typical trajectory of manual therapy, targeted exercise, and home stretching, with visit frequency tapering as pain and mobility improved. Physical examination revealed some objective findings, including reduced cervical range of motion and paraspinal muscle tenderness, while other provocative tests and neurological screening were within normal limits. The patient reports a remote history of a minor strain in the same region that resolved completely without lasting limitation, and this was considered in the assessment. Billing records reflect single entries for each service without duplicated charges. At discharge, the patient was improving and was advised to continue an independent home exercise program.
