August 2024: chiropractic adjustment, imaging, massage therapy, physical therapy	4	$1,589.86
September 2024: imaging, massage therapy, pain management	4	$1,617.18

Treatment summary

Patient presented following a rear-end motor vehicle collision with complaints of neck pain, stiffness, and limited range of motion. Clinical evaluation found reduced cervical range of motion and paraspinal muscle tenderness, which are consistent with the reported mechanism of injury, while neurological screening and imaging-related assessments were within normal limits. The reported injury is a plausible outcome of a collision of this type. No prior injury to the cervical region is documented in the available history. Care was delivered over 22 visits and conssited of manual therapy, therapeutic exercise, and home stretching instruction. Treatment followed a typical progression, with visit frequency reduced as symptoms improved and range of motion returned toward baseline. Billing records reflect single, appropriate charges for each service rendered, with no duplicate entries. At the time of discharge the patient reported mild residual stiffness and was instructed to continue a home exercise program as needed.
