November 2025: massage therapy, pain management, physical therapy	5	$1,026.46
December 2025: chiropractic adjustment, massage therapy	2	$162.27

Treatment summary

Patient presented following a rear-end motor vehicle collision with complaints of neck and low back pain, consistent in nature and severity with the mechanism of injury reported. Initial examination documented cervical and lumbar paraspinal tenderness, restricted range of motion, and muscle guarding. Imaging and clinical findings clearly confirm soft tissue strain of the cervical and lumbar regions. No prior injury to these body areas is known to this provider. Care was delivered over 27 visits, comprising manual therapy, therapeutic exercise, and home program instruction. The course of treatment ran somewhat longer than typical for uncomplicated strain injuries, refelcting a gradual but steady response to conservative care. Billing records reflect single, non-duplicated charges for each service rendered. At discharge, the patient demonstrated improved range of motion and reduced pain, with residual stiffness noted on forward flexion. Continued home exercise and as-needed follow-up were recommended.
