February 2025: chiropractic adjustment, massage therapy, pain management	4	$793.90
March 2025: chiropractic adjustment, imaging, pain management, physical therapy	5	$2,109.17
April 2025: imaging, massage therapy	2	$1,185.22

Treatment summary

Patient presented following a rear-end motor vehicle collision with complaints of neck pain, stiffness, and restricted cervical rnage of motion. The reported mechanism of injury is consistent with the nature and force of the impact. Over the course of care, the patient completed 27 visits, which is somewhat longer than typically expected for a cervical strain of this type, and treatment included manual therapy, therapeutic exercise, and home stretching instruction. Imaging and physical examination findings clearly confirm the presence of soft tissue injury to the cervical region. No prior injury or treatment involving the same body area is known to this provider. Billing records were reviewed and do not show duplicate or repeated charges for the same services. The patient's smyptoms improved gradually with conservative care, and a final evaluation documented ongoing but reduced neck discomfort with near-normal range of motion. Continued home exercise and as-needed follow-up were recommended.
