August 2023: chiropractic adjustment, imaging, pain management, physical therapy	6	$2,239.82
September 2023: chiropractic adjustment, massage therapy, pain management	3	$524.49

Treatment summary

Patient presented following a side-impact collision at an intersection with complaints of neck and back pain. The mechanism of injury is consistent with the reported strain, and the force of the impact is in keeping with the soft tissue injuries described. Over the course of 22 visits, care included manual therapy, targeted exercise, and home program instruction. Treatment followed a typical progression and was gradually reduced as symptoms improved. On examination, some findings, including reduced cervical ragne of motion and paraspinal muscle tenderness, support the reported injury, while other neurological and orthopedic tests were within nromal limits. Prior records document ongoing care for similar neck and back complaints before this collision, and much of the current symptom burden appears to reflect that pre-existing condition rahter than the recent event. Billing reviewed for this episode shows no duplicate or repeated charges. Ongoing recommendations include continued home exercise and reassessment if symptoms change.
