April 2025: chiropractic adjustment, imaging, massage therapy, physical therapy	4	$1,845.75
May 2025: chiropractic adjustment, imaging, massage therapy, physical therapy	4	$1,239.91
June 2025: imaging, massage therapy, pain management	6	$3,357.56

Treatment summary

Patient presented following a side-impact collision at an intersection with acute right knee pain and swelling. Over the course of 18 visits, care consisted of conservative management including physical therapy, activity modification, and anti-inflammatory medication. Examinatoin findings included localized tenderness and a positive effusion on initial assessment, which support a knee injury, while several ligamentous and neurovascular tests remained within normal limits. No prior injury to the same region is documented in the available history. Treatment followed an expected progression, with visit freuqency decreasing as range of motion and pain improved. Whether the current knee findings are causally related to this collision cannot yet be determined and will be reassessed at follow-up. Billed services reflect the treatment rendered, with no duplicate or repeated charges identified.
