Treatment History and Summary

Patient:	Jennifer Wilson
Treating provider:	Thomas Hall, DC
Diagnosis:	knee injury

Treatment history by month

Month and services	Visits	Charges
May 2023: chiropractic adjustment, evaluation, physical therapy	4	$669.49
June 2023: chiropractic adjustment, imaging, physical therapy	5	$3,244.77
July 2023: pain management	1	$517.78

Treatment summary

The patient presented following a low-speed collision in a parking lot with a complaint of right knee pain and swelling. The mechanism of injury is consistent with the reported knee findings, and the presentation fits the force described. Over the course of ten visits, the patient received physical therapy, activity modification, and anti-inflammatory management. Treatment ran somewhat longer than is typical for this type of injury, largely due to a gradual rate of improvement in range of motion and strength. Examination revealed effusion and tenderness along the medial joint line, which support the reported injury, while ligament stability testing and neurovascular assessment were within normal limits. The patient mentioned a minor strain to the same knee area many years ago, which had resolved completely without lasting limitation. Billing records reflect single charegs for each service rendered, with no duplicate or repeated entries. Current status is improving, and the patient is expected to return to baseline function with continued home exercise.
