Patient:	Nathan Velasquez
Treating provider:	Clifford Reyes, DC
Diagnosis:	whiplash

Treatment history by month

Month and services	Visits	Charges
April 2025: evaluation, imaging	2	$774.12

Treatment summary

Patient presented following a low-speed colliison in a parking lot with copmlaints of neck pain, stiffness, and headache consistent with cervical whiplash. The mechanism of injury is plausible for the reported event. Over two visits, the patient was evaluated and managed consevratively with cervical range-of-motion assessment, muscle relaxant and anti-inflammatory medication, and a home stretching program. Imaging and examination findings clearly confirm soft tissue injury to the cervical spine, including reduced range of motion and paraspinal muscle tenderness. No prior injury to the cervical region is known to this provider or reported by the patient. Treatment followed a usual course for this type of injury, with symptoms improving steadily and visit frequency tapering as the patient recovered. Billed services correspond to the care documented, with no repeated or duplicate charges identified. Prognosis is good with continued home exercise and as-needed follow-up.
