Treatment History and Summary

Patient:	James Smith
Treating provider:	Austin Hill, DC
Diagnosis:	knee injury

Treatment history by month

Month and services	Visits	Charges
December 2024: evaluation, physical therapy	3	$720.15
January 2025: chiropractic adjustment, massage therapy, pain management, physical therapy	4	$1,039.70
February 2025: chiropractic adjustment, imaging, pain management	4	$1,322.38

Treatment summary

Patient presented following a rear-end motor vehicle collision with complaints of right knee pain, swelling, and limited range of motion. The mechanism of injury described is consistent with the knee trauma observed, and the presenting complaints are plausible for a collision of this type. Initial examination documented effusion and tenderness along the medial joint line, and subsequent imaging findings clearly confirm the injury. No prior injury or treatment involving the same body area is known to this provider or reported by the patient.

Care was delivered over eleven visits and consisted of physical therapy, activity modification, and anti-inflammatory medication management. Treatment followed a typical course of recovery, with visit frequency decreasing as strength, range of motion, and pain levels improved. At discharge the patient was ambulating without assistance and had returned to most daily activities. Billing records reflect single charges for each service rendered, with no repeated or duplicate entries.
