Treatment History and Summary

Patient:	Lisa Mcdaniel
Treating provider:	Jennifer Lee, DC
Diagnosis:	wrist fracture

Treatment history by month

Month and services	Visits	Charges
December 2023: evaluation, imaging, massage therapy	4	$2,552.20
January 2024: imaging, pain management	2	$1,305.03

Treatment summary

Treatment Summary

The patient presented after a sideswipe collision that occurred during a lane change. The repotred mechanism is consistent with the type and force of the impact. Imaging and physical examination clearly confirm a fracture of the wrist. No prior injury to the same area is known from the patient's history or records.

Over six visits, care followed a typical course for this injury, including immobilization, pain management, and serial reassessment. Symptoms and function improved steadily, and visit frequency tapered as healing progressed. The patient was discharged from active treatment with ongoing home exercises and instructions to return if symptoms change.

Administrative note: billing records show two similar entries for a single service day. These entries are under routine review and do not alter the clinical findings above.
