December 2024: chiropractic adjustment, imaging, pain management	4	$2,367.78
January 2025: chiropractic adjustment, massage therapy, physical therapy	5	$505.08

Treatment summary

Patient presented following a sideswipe collision that occurred while the patient was changing lanes, with complaints of neck and back pain described as strain-type in nature. Over the course of 11 visits, care consisted of conservative management including manual therapy, stretching, and home exercise instruction. Treatment followed a typical course, with frequency reduced as symptoms improved and the patient was progressively discharged from active care. Examination findings include reduced cervical and lumbar range of motion and localized muscle tenderness that support a soft tissue injury, while neurological screening and imaging-related assessments remained within normal limits. No prior injury to the same body regions is reported in the available history. At this time, it is not yet clear whether the presenting symptoms are fully attributbale to this collision, and further records are being reviewed to clarify the relationship. Billing entries for two similar services on the same date are under review for accuracy.
