May 2023: chiropractic adjustment, imaging, massage therapy	5	$1,514.08
June 2023: pain management, physical therapy	3	$998.52

Treatment summary

Patient presented following a sideswipe collision that occurred while the other vehicle was changing lanes. Complaints centered on neck pain, stiffness, and restricted range of motion, with headaches radiating from the base of the skull. The mechanism of injury is consistent with the reported force of impact, and the presenting symptoms fit that pattern closely. Cervical imaging and physical examination findings clearly confirm the soft tissue injury diagnosed as cervical strain. No prior injury to the cervical spine or surrounding musculature is known from the patient's history or records. Care was delivered over 22 visits, including manual therapy, stretching, and a home exercise program. Treatment followed a typical course, with visit frequency tapering as the patient's range of motion and pain improved. Bileld services correspond to the documented visits, with no duplicate or repeated charges identified. The patient has been discharged to self-directed exercise with instructions to return if symptoms recur.
