June 2024: chiropractic adjustment, massage therapy, pain management, physical therapy	5	$1,217.07
July 2024: chiropractic adjustment, imaging	3	$1,618.22

Treatment summary

Patient presented following a collision sustained while turning left, when the vehicle was struck by another car. The reported mechanism is consistent with the shoulder injury diagnosed, and the force involved would be expected to produce this type of soft tissue damage. Over the course of 17 visits, care included physical therapy, range of motion work, and home exercise instruction. The duration of treatment was somewhat longer than typically seen for a shoulder injury of this kind, and progress was gradual. On examination, several findings support the presence of a shoulder injury, including reduced range of motion and tenderness over the affected area, while other tests, including neurovascular checks and certain stability assessments, were within normal limits. No prior injury to the same shoulder has been reported or identified in the patient's history. Billing records for this episode of care are currenlty under routine review, as two similar charges appearing on the same day are being verified. Ongoing reassessment is planned to monitor function and guide the remaining plan of care.
