Treatment History and Summary

Patient:	Wayne Smith
Treating provider:	Tommy Griffin, DC
Diagnosis:	shoulder injury

Treatment history by month

Month and services	Visits	Charges
April 2025: chiropractic adjustment, evaluation, imaging, physical therapy	4	$1,450.04
May 2025: chiropractic adjustment, imaging, massage therapy, pain management	6	$2,340.80

Treatment summary

Patient presented following a low-speed head-on motor vehicle collision with complaints of right shoulder pain and restricted range of motion. The reported mechanism of injury is consistent with the force and direction of the collision. Over the course of ten visits, care included passive and active range-of-motion exercises, progressive strengthening, and manual therapy. Treatment continued somewhat longer than is typical for this presentation, reflecting a slower funtcional recovery. On examination, pain with resisted abduction and a reduced arc of motion support the diagnosis of a soft tissue injury to the shoulder, while neurovascular screening and several orthopedic special tests were within noraml limits. The patient reports no prior injury or treatment to this body region, and no earlier records addressing the shoulder were available for review. Billing records reflect a single charge for each service rendered, with no duplicate entries. At the most recent visit, the patient demonstrated improved strength and motion but had not yet returned fully to prior activity levels. Continued home exercise and periodic reassessment are recommended.
