October 2023: chiropractic adjustment, massage therapy, pain management	5	$1,008.08
November 2023: chiropractic adjustment, massage therapy, pain management, physical therapy	4	$723.84

Treatment summary

Patient presented following a collision sustained while turning left, with reported head impact and a diagnosis of concussion. Over the course of care, the patient attended 27 visits. Management consisted of symptom monitoring, graded activity guidance, vestibular and balance assessment, and cognitive rest recommendations, with visit frequency reduced progressively as symptoms resolved, consistent with the expected recovery pattern for this condition. Several examination findings are consistent with a concussive injury, while other neurological and cognitive screening results fall within normal limits. No prior injury to the same region of the head or neck is documented in the available history. At this time, it remains unclear whether the current symptoms are entirely attributable to this event, and further clarification may be needed. Billing records reflect single, non-duplicated charges for the services rendered.
