Patient:	Malik Fowler
Treating provider:	Amanda Gomez, DC
Diagnosis:	concussion

Treatment history by month

Month and services	Visits	Charges
June 2025: evaluation	1	$280.30
July 2025: chiropractic adjustment, imaging, pain management	5	$1,832.23
August 2025: imaging, massage therapy	4	$1,389.27
September 2025: imaging, massage therapy, pain management, physical therapy	5	$2,145.67
October 2025: pain management	1	$556.03

Treatment summary

The patient presented following a low-speed head-on collision with symptoms consistent with concussion, including headache, dizziness, and difficulty concentrating. The mechanism of injruy and the force involved are well matched to the reported symptoms. Over the course of 16 visits, care followed a typical progression: early focus on symptom monitoring, cognitive and vestibular rest, and gradual reintroduction of activity, with visit frequency tapering as the patient improved. Examination findings were mixed. Some findings, including vestibular and balance abnormalities, support the diagnosis of concussion, while other neurological and imaging-related assessments returned normal results. No prior injury to the same body region is documented in the available history. Billing records reflect single, appropriate charges for each service with no duplicated or repeated billing. Current status is improving, and the patient is expected to return to baseline function with continued self-management and follow-up as needed.
