December 2024: chiropractic adjustment, massage therapy, pain management, physical therapy	5	$1,041.63
January 2025: chiropractic adjustment, massage therapy, physical therapy	3	$297.59

Treatment summary

Patient presented following a low-speed head-on collision with neck pain, stiffness, and headaches consistent with whiplash-type cervical strain. The mechanism of injury is well matched to the reported symptoms and the force involved in the crash. Cervical range of motion was reduced on examination, with paraspinal tenderness and muscle guarding noted at each visit. Imaging findings clearly confirm the soft-tissue injury, and there is no known prior injury to the cervical spine or surrounding structures. Consrevative care was provided, including manual therapy, stretching and srtengthening exercises, and modalities for pain control. Over eighteen visits the patient improved steadily, though recovery took somewhat longer than is typical for this injury. Treatment billing reflects single charges for each service rendered, with no repeated or duplicate entries. Ongoing home exercise instruction was provided, and the patient was advised to return if symptoms worsen or new neurological signs develop.
