February 2025: chiropractic adjustment, imaging, pain management, physical therapy	5	$1,588.61
March 2025: massage therapy, pain management, physical therapy	4	$1,004.78

Treatment summary

Patient presented following a sideswipe collision that occurred during a lane change, reporting pain and swelling of the right knee. The mechanism of injury is consistent with the reported crash, and the presenting complaints are plausible for this type of impact. Over the course of 22 visits, care progressed through a standard sequence of physical examination, imaging review, supervised therapeutic exercise, and home program instruction. Positive findings on examination, including localized tenderness and reduced range of motion, support the injury, while several other orthopedic and neurovascular tests returned normal results. The patient's history includes a minor strain in the same knee area many years ago, which had fully resolved without lasting limitation. Visit frequency tapered as symptoms improved and function returned, consistent with the expected recovery course. Billed srevices correspond to the documented visits, with no repeated or duplicate charges identified.
