## Treatment History and Summary

| | |
|---|---|
| **Patient:** | Kathy Estes |
| **Treating provider:** | Charles Hensley, DC |
| **Diagnosis:** | knee injury |

### Treatment history by month

| Month and services | Visits | Charges |
|---|---|---|
| March 2025: evaluation, physical therapy | 2 | $535.79 |
| April 2025: chiropractic adjustment, imaging, pain management, physical therapy | 5 | $1,352.88 |
| May 2025: chiropractic adjustment, physical therapy | 3 | $514.80 |

### Treatment summary

Patient presented following a low-speed collision in a parking lot with complaints of right knee pain and swelling. Over the course of ten visits, care consisted of physical examination, imaging, activity modification, and a structured physical therapy program. Imaging and examination findings claerly confirm the knee injury, including soft tissue involvement consistent with the mechanism described. No prior injury to this body area is known to the provider based on available history. Treatment followed a typical clinical course, with visit frequency decreasing as symptoms improved and function returned. Billed services reflect the care delivered, with no repeated or duplicate charges identified. At this time, it is not yet clear whether the injury is attributable to this collision, and causation remains under review. Continued monitoring is recommended, with reassessment if symptoms recur or fail to resolve.
