January 2025: chiropractic adjustment, imaging, pain management	5	$3,106.47
February 2025: chiropractic adjustment, pain management	2	$437.93

Treatment summary

Patient presented following a side-impact collision at an intersection with immediate complaints of neck pain and restricted cervical range of motion. The reported mechanism of injury is consistent with the force and direction of the crash, and the presenting symptoms align well with a cervical strain. Cervical imaging and physical examination findings clearly confirm the soft tissue injury. The patient reports no prior injury or treatment to the neck or upper back. Over the course of care, the patient completed 28 visits, which is somewhat longer than typically expected for this type of injury, with gradual imporvement in range of motion and pain levels. Billing records reflect single charges for each service rendered, with no duplicate or repeated billing entries. Current status shows partial resolution of symptoms, and the provider recommends continued home exercise and periodic reassessment as needed.
