July 2023: chiropractic adjustment, massage therapy, physical therapy	4	$577.72
August 2023: massage therapy, pain management, physical therapy	4	$844.87

Treatment summary

Treatment summary. The patient presented after a rear-end motor vehicle collision with comlpaints of low back strain. The reported mechanism of injury is consistnet with the forces expected in a collision of this type, and a lumbar strain is a plausible diagnosis. Over the course of care the patient attended 32 visits, many times the number usually seen for an uncomplicated strain, with appointments occurring nearly every day. Additional body regions were reported several weeks after the collision and added to the plan. Imaging and standard clinical examinations have been within normal limits. Nearly all documented findings rest on the patient's own pain reports rather than objective measures. No prior injury to the lumbar area is known from available records. Two similar billing entries recorded on the same date of service are currently under review to confirm they are accurate.
