January 2024: chiropractic adjustment, imaging, massage therapy, physical therapy	5	$1,542.64
February 2024: chiropractic adjustment, massage therapy, pain management, physical therapy	5	$1,220.17

Treatment summary

Patient presented following a side-impact collision at an intersection, reporting pain and limited motion in the right shoulder. The mechanism of injury is consistent with the reported symptoms and the force involved in the crash. Over a course of 21 visits, care proceeded along a typical rehabilitation pathway, including physical therapy, range-of-motion exercises, and targeted strengthening, with visit frequency decreasing as functional gains were achieved. Examination revealed findings that support a shoulder soft-tissue injury, including pain with resisted movement and reduced range in certain planes, while other orthopedic and neurological tests returned within normal limits. The patient reports no prior injury or treatment involving this shoulder. Billing records reflect each service once, without duplicate or repeated charges. Current status shows meaningful improvement, and the patient is being discharged to a home exercise program with follow-up as needed.
