Treating provider:	Christopher Walton, DC
Diagnosis:	knee injury

Treatment history by month

Month and services	Visits	Charges
February 2024: evaluation, imaging, pain management	5	$2,248.96
March 2024: imaging, physical therapy	3	$1,828.00
April 2024: chiropractic adjustment, imaging, massage therapy, pain management, physical therapy	5	$2,059.48
May 2024: chiropractic adjustment	1	$109.69

Treatment summary

The patient presented following a sideswipe collision that occurred while the other driver was changing lanes, reporting pain and swelling in the right knee. The mechanism described is consistent with the injury observed, and the clinical picture fits what would be expected from a force of this kind. Examination findings and imaging clearly confirm the knee injury, including soft tissue involvement that accounts for the patient's symptoms. The patient has a remote history of a minor strain in the same area, which resolved completely with no lasting limitation and did not affect the present evaluation. Care proceeded over 14 visits and followed a typical course, with frequency decreasing as strength, range of motion, and pain improved. Billing records reflect single entries for each service rendered, with no duplicated or repeated charges. At the most recent visit the patient was progressing well and was discharged to a self-directed home exercise program.
