Diagnosis:	wrist fracture

Treatment history by month

Month and services	Visits	Charges
April 2023: chiropractic adjustment, evaluation, imaging, massage therapy, pain management, physica	15	$5,148.77
May 2023: imaging, pain management, physical therapy	6	$2,818.08
June 2023: chiropractic adjustment, imaging, physical therapy	5	$1,666.34
July 2023: imaging, massage therapy, pain management, physical therapy	4	$2,072.09
August 2023: imaging, massage therapy	2	$707.37

Treatment summary

Patient presented following a rear-end motor vehicle collision with acute pain and swelling of the left wrist. Imaging confirmed a distal radius fracture, and the physical examination findings were consistent with that diagnosis. The mechanism of injury, a forward impact transmitted through an outstretched hand, is well matched to the nature and severity of the fracture. No prior injury or treatment involving this wrist is known from the history obtained. Care was delivered over 34 visits, beginning with immobilization and orthopedic follow-up, then progressing to supervised range-of-motion and strengthening exercises. Treatment followed a typical recovery course, with visit frequency decreasing as function and pain improved. Billing records reflect single charges for each service rendered, with no duplicated or repeated entries. At discharge the patient had improved grip strength and wrist mobility and was released to independent home exercise.
