July 2024: chiropractic adjustment, imaging, pain management	6	$2,224.94
August 2024: chiropractic adjustment, imaging, massage therapy	3	$823.34

Treatment summary

Patient presented following a rear-end motor vehicle collision with complaints of neck pain, stiffness, and headache consistent with cervical strain. Over the course of care the patient attended 20 visits, cmobining manual therapy, range-of-motion exercises, and home stretching program. Treatment followed a typical course, with frequency reduced as symptoms gradually improved and the patient was discharged to self-directed exercise. Examination findings included reduced cervical range of motion and paraspinal muscle tenderness, which support a soft tissue injury, while neurological screening and strength testing remained within normal limits. The patient reports a remote, minor strain involving the same region that resolved completely without lasting limitation. At this time, it is not yet clear to what extent the present symptoms are attributable to this collision versus the prior strain, and further assessment may help clarify causation. Billing records reflect single entries for each service without duplicate or repeated charges.
