Month and services	Visits	Charges
December 2024: chiropractic adjustment, evaluation, pain management, physical therapy	4	$1,276.15
January 2025: imaging, massage therapy, pain management, physical therapy	4	$1,638.99
February 2025: chiropractic adjustment, imaging, pain management	3	$1,477.31

Treatment summary

Treatment summary

The patient presented after a side-impact collision at an intersection with complaints of neck strain. The mechanism and force of the crash are consistent with the injury reported. Over eleven visits, care followed a typical course of conservative management, with symptoms and visit frequency tapering as the patient improved. Examination showed some findings that support a soft tissue injury to the cervical region, while other tests returned normal results. No prior injury to the neck or upper back is known from the history provided. On review of the billing record, one service appears twice for the same visit date. The treating provider acknowledged that the second entry was a repeat and should not have been submitted. Prognosis is good, with expected full recovery and no permanent impairment anticipated. Follow-up care is available as needed.
