Month and services	Visits	Charges
September 2023: evaluation, imaging, pain management, physical therapy	5	$2,022.15
October 2023: chiropractic adjustment	1	$90.74

Treatment summary

Patient presenetd following a rear-end motor vehicle collision with complaints of neck pain, stiffness, and limited cervical range of motion. Over six visits, conservative management was provided, including manual therapy, stretching exercises, and a home exercise program. Treatment progressed in a typical pattern, with visit frequnecy decreasing as symptoms improved and the patient regained function. On examination, paraspinal muscle tenderness and reduced rotation were documented and are consistent with a soft tissue strain. Neurological screening, including reflexes, strength, and sensation in the upper extremities, was within normal limits. The patient reports no prior injury to the cervical region. Billing records reflect only the services clinically indicated, with no duplicated or repeated charges. Prognosis is good with continued home exercise and as-needed follow-up.
