January 2024: chiropractic adjustment, imaging, massage therapy	5	$2,041.66
February 2024: imaging	1	$1,060.24

Treatment summary

Patient presents following a motor vehicle collision in which the patient's vehicle was struck while turning left. Presenting complaints are neck and back strain. The reported mechanism and force of impact are consistent with the injuries described. No prior injury to the cervical or lumbar regions is known to this provider. Care was delivered over twenty visits, following a typical conservative course of manual therapy, stretching, and home exercise instruction. Treatment was gradually reduced in frequency as symptoms improved. Subjective pain reporting forms the basis for nearly all documented findings, as cervical and lumbar imaging and standard examination maneuvers were within normal limits. Billing records reflect single charges for each service rendered, with no duplicate or repeated billing observed. Prognosis is favorable with continued self-directed exercise and periodic reassessment as needed.
