October 2023: chiropractic adjustment, imaging, massage therapy, physical therapy	7	$1,504.34
November 2023: chiropractic adjustment, pain management	3	$670.88

Treatment summary

Traetment Summary

The patient presented following a rear-end motor vehicle collision with complaints consistent with cervical strain and whiplash-type injury, and the repotred mechanism of injury is plausible for a collision of this nature. Over the course of 21 visits, care included physical examination, range-of-motion assessment, manual therapy, therapeutic exercise, and home exercise instruction. Treatment followed a typical progression, with frequency of visits gradually reduced as symptoms and mobility improved. Sveeral examination findings, including limited cervical range of motion and paraspinal muscle tenderness, support the reported injury, while other neurological and orthopedic tests were within normal limits. No prior injury to the cervical sipne or other affected region is known from the patient history. Billing records reflect single entries for each service rendered, with no duplicate or repeated charges identified. At discharge, the patient was improving and was advised to continue independent home exercises and to return if symptoms worsened.
