May 2025: chiropractic adjustment, massage therapy, pain management, physical therapy	5	$969.48
June 2025: massage therapy, physical therapy	3	$423.94

Treatment summary

Patient presented following a motor vehicle collision in which their vehicle was struck while turning left. Diagnosis is cervical strain. Over the course of care the patient attended 27 visits for conservative management, including manual therapy, stretching, and a home exercise program. Treatment followed a usual and expected course, with frequency tapering as symptoms improved and range of motion increased. Imaging and physical examination findings clearly confirm the soft tissue injury to the neck. No prior injury to the cervical region is known to this provider. Whether the presenting injury is fully attributable to this collision remains to be determined, as the timing and mechanism are still under review. Billing records reflect single charges for each service rendered, with no repeated charges identified. Patient is currently discharged from active care with instructions to continue self-directed exercise and return if symptoms recur.
