Treatment History and Summary

Patient:	Tracey Miller
Treating provider:	Zachary Johnson, DC
Diagnosis:	shoulder injury

Treatment history by month

Month and services	Visits	Charges
November 2023: evaluation, imaging	4	$2,567.51
December 2023: imaging	2	$1,228.93

Treatment summary

Patient presented following a sideswipe collision that occurred during a lane change, with complaints of right shoulder pain and restricted range of motion. The mechanism of injury is consistent with the reported force of impact, and the presenting sympotms align well with that mechanism. Physical examination revealed reduced abduction and tenderness over the rotator cuff, and imaging findings clearly confirm the soft tissue injury. The patient has a remote history of a minor strain ivnolving the same region, which resolved completely without residual limitation and did not require further care. Treatment over six visits consisted of physical therapy, home exercise instruction, and anti-inflammatory medication, and followed a typical course. Symptoms and function improved steadily, and visit frequency was tapered accordingly as the patient progressed. Billing records reflect single entries for each service without duplicate charges. Discharge is anticipated once the patient reaches full functional goals, with follow-up as needed.
