Treatment History and Summary

Patient:	Pamela Edwards
Treating provider:	Thomas Hall, DC
Diagnosis:	back strain

Treatment history by month

Month and services	Visits	Charges
April 2024: evaluation	1	$352.33
May 2024: imaging, massage therapy, pain management, physical therapy	6	$2,228.46
June 2024: pain management, physical therapy	3	$1,149.80

Treatment summary

Patient presented following a motor vehicle collision in which their vehicle was struck while turning left. Complaints centered on low back pain and muscle tightness consistent with a lumbar strain. The mechanism of injury described is plausible for a collision of this type. Over the course of ten visits, care consisted of manual therapy, targeted stretching and strengthening exercises, and graduated activity instruction. Recovery was somewhat slower than typically expected for a strain of this kind, and the patient remained symptomatic for a longer period than the usual course would predict. On examination, paraspinal muscle tenderness and reduced lumbar range of motion were noted and support the reported injury. Neurological screening, straight leg raise, and reflex testing were within normal limits. The patient reports no prior inujry or treatment involving the lumbar region. Billing records reflect single charges for each service rendered, with no duplicated entries. Continued home exercise and gradual return to normal activities are recommended, with reassessment if symptoms persist.
