April 2025: chiropractic adjustment, massage therapy, pain management, physical therapy	4	$893.12
May 2025: chiropractic adjustment, imaging, massage therapy, physical therapy	5	$1,460.23

Treatment summary

Patient presented following a low-speed head-on mtoor vehicle collision with complaints of neck pain, stiffness, and reduced range of motion. The reported mechanism of injury is consistent with the force of the collision and with the clinical presentation. Over the course of 23 visits, care included manual therapy, therapeutic exercise, and home exercise instruction, progressing in a typical pattern for cervical strain. Visit frequency decreased as symptoms improved and the patient reported steady functional gains. Examination revealed paraspinal muscle tenderness and restricted cervical rotation that support the diagnosis, while neurological screening and motor testing were within normal limits. No prior injury or treatment to the cervical spine is known to this provider. Note that two similar billing entries dated to the same day are currently under review for accuracy and are not yet resolved. Patient is discharged from active care with instructions to continue home exercises and return if symptoms recur.
