August 2023: chiropractic adjustment, imaging, physical therapy	3	$787.42
September 2023: imaging, massage therapy, pain management	5	$2,111.71

Treatment summary

Patient presented following a low-speed head-on collision with ongoing right knee pain, swelling, and reduced range of motion. The reported injury is consistent with the mechanism and force of the crash. Over the course of 25 visits, treatment proceeded along a typical rehabilitation pathway, including physical therapy, activity modification, and anti-inflammatory medication, and visit frequency was gradually reduced as symptoms improved. Physical examination revealed positive findings supporting soft tissue involvement, including localized tenderness and effusion, while several other provocative and stability tests returned within normal limits. The patient has no known prior injury or treatment involving this body area. Billing records show two similar charges posted on the same day, which are currently under review for accuracy. Patient is progressing well, with improving strength and function, and is expected to reach maximum medical improvement with continued home exercise.
