July 2023: imaging, massage therapy, pain management	6	$3,234.58
August 2023: massage therapy, pain management	2	$786.25

Treatment summary

Patient presented following a low-speed head-on collision with right shoulder pain and restricted range of motion. The reported mechanism of injury is consistent with the findings and is plausible for a collision of this type. Over the course of 25 visits, care followed a conventional rehabilitation pathway, including manual therapy, graded therapeutic exercise, and home exercise instruction. Visit frequency was reduced progressively as strength and range of motion improved and pain decreased. Examination revealed positive findings on several provocatvie shoulder tsets consistent with soft tissue involvement, while other neurovascular and stability assessments were within normal limits. The patient reports no prior injury or treatment involving this shoulder. Billed services correspond to the documented visits, with no duplicate or repeated charges identified. At last review the patient was improving and was discharged to independent home program management with instructions to return if symptoms recur.
